Packaging for Two Spacepods

Clear Inside Crate Dimensions 32 1/4" high, 28 1/8" wide, 58" long DT8525 Top and DT8524 bottom templates for two spacepods. Double line bottom and all sides with foam. (Do not use staples) Foam is to overlap the tops of the boxes. Use uncut pieces to go down one side, across the bottom and up the other side.

Use templates to cut and score the bottom and top spreader. Use cardboard to make each spreader and cut a piece of foam the size of the DT8525 top spreader. With extreme caution insert one Spacepod upright into the box with the door of the Spacepod facing the long part of the box. Place a double layer of foam across the floor. Insert the second Spacepod so the floor fits over the door of the first Spacepod and the door faces the long part of the box on the opposing side. Cut four pieces of foam into 24" lengths. Fold each piece in half and then half again. Tape to box at hinge locations so as to prevent hinges from making contact with the sides of the box. Fold both door props up perpendicular to the floor and insert bottom spreader so that the sides of each fold, fold up at the doors. Lower the door props over the spreader and insert the props back into clips. This secures the spreader in place. Place the top spreader and foam, foam side down to the Spacepods, over the top of the Spacepods. Fold spreader, so the at the flaps go down between the Spacepods. The spreaders should prevent any movement of the Spacepods. Place the hardware, which has previously be packaged in foam in a corner of the box behind the Spacepod. Foam that overlapped the boxes during initial preparation now gets folded across the top of the box to protect top of Spacepods. Apply label as per instruction in QSI 014 sect 4.5, then tape and staple in place.
